HOW TO FOLD A SPEED JET

Use page 1 as the aeroplane. Keep this page beside you as the guide.

BEFORE YOU START Keep page 1 flat. Lightly pre-crease every dashed line, then reopen it.

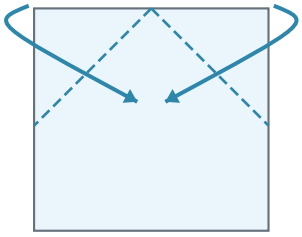

The crease direction does not matter yet. This keeps every guide usable after other folds cover the printing.

1 Make the centre crease

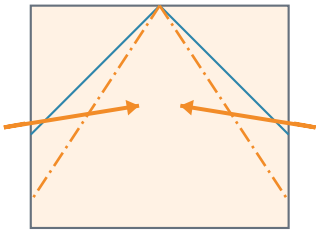

Fold line 1 lengthways. Press the crease, then reopen the sheet completely.

2 Fold in the top corners

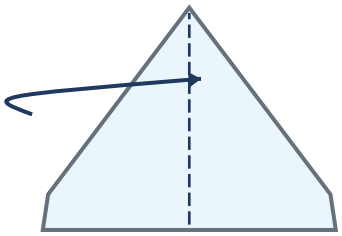

Fold both corners on lines 2. The top edges should meet neatly along the centre crease.

3 Sharpen the nose

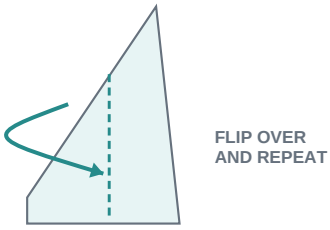

Fold the two new sloping edges inward on lines 3 so they meet tightly at the centre.

4 Close the body

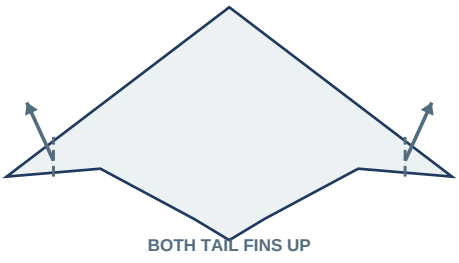

Fold the whole aeroplane in half on the centre crease, with the folded layers outside.

5 Fold the narrow wings

Fold one wing down on line 5. Turn the jet over and repeat, matching the first wing.

6 Raise the tail fins

Fold both short rear strips upward on lines 6. Keep both fins vertical and the wings level.

FLIGHT TIP Hold the body underneath and use a firm, level throw. Match both fins if it turns.
